                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               neighbouring submissions.

The true left end of clone C47E12 is at 1 in this sequence. The true left end of clone F44D12 is at 37752 in this sequence. The true right end of clone T13H10 is at 4978 in this sequence. The start of this sequence (1. .104) overlaps with the end of sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Human DNA sequence from clone 1042K10 on chromosome 22q13.1-13.2.
Contains the ADSL gene for Adenylosuccinate lyase (EC 4.3.2.2,
Adenylosuccinase, ASL) and 4 novel genes (one with probable rabgap domains and Src homology domain 3). Contains ESTs, STSS, GSSs and
                                                                                                           on Jan 22, 1999 this sequence version replaced gi:3927920. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission that the compared to the sequence submission.
                                                                                            corresponding to the overlapping clone, as we submit sequences
